Computer

Topic: Features of Computer and Computer Hardware and Software

A **computer** is a smart machine which works on the principle of **Input-Processing-Output (IPO)** cycle. It takes input from the user, processes it and gives the output in the form of meaningful information. It stores and processes data at a very high speed with accuracy.

Features of a Computer

The following features make computer a smart machine.

- **Speed:** As compared to humans, a computer works very fast and does a large number of calculations quickly.
- **Accuracy:** A computer always gives correct results. Errors are reported due to incorrect data or instructions from the user.
- **Versatility:** A computer performs a variety of tasks. Hence, is also known as a multi-tasking machine.
- **Storage:** A computer can store large amount of data and information which can be retrieved whenever required. A limited amount of data is stored temporarily

in the primary memory. A large amount of data can be stored in the secondary storage devices for a longer period of time.

- **Diligence:** A computer can work for long hours with the same speed and accuracy, without getting tired.
- **Reliability:** Computers are reliable. They do not make mistakes.

Computers have many advantages but they also have certain disadvantages.

- **Zero Intelligence:** A computer does not have any intelligence of its own. If incorrect input is given, the output will be incorrect too.
- **Effect on Health:** Working on a computer for long hours leads to weak eyesight and causes obesity.

Computer Hardware

Computer hardware are the parts of a computer system which we can see and touch. They are divided into different categories on the basis of their functions.

Gain Knowledge

Input and Output devices are together called Computer Peripherals or Peripheral Devices.

Devices	Uses	Examples
Input devices	They are used to provide input to a computer.	Mouse, keyboard, scanner
Processing device	This is used to process the given inputs.	Central Processing Unit (CPU)
Output devices	They give the processed output.	Monitor, printer, speaker
Storage devices	They are used to store data for future use.	Pen drive, CD-ROM, DVD

Computer Software

Hardware cannot work on its own and needs instructions. These instructions are in the form of programs. Software is a set of programs that tells a computer to perform specific task.

Gain Knowledge

Windows is a system software while Word 2016 is an application software.

Exercise:

1

A Fill in the blanks.

1. A computer is a _____ machine which works on the principle of _____ cycle.
2. A computer always gives _____ results.

3. Computer hardware are the parts of computer which we can _____ and _____.
4. Hardware is divided into different categories on the basis of _____.
5. _____ is a set of programs that tells computer to perform a _____ task.

B) Name the following:

Two types of softwares

A processing device

Two output devices

Two storage devices

C) Answer the following:

1) State any five features of computer.

2) Differentiate between computer hardware and software.
